

Atom-Type Enrichment: Good vs Bad Seeds

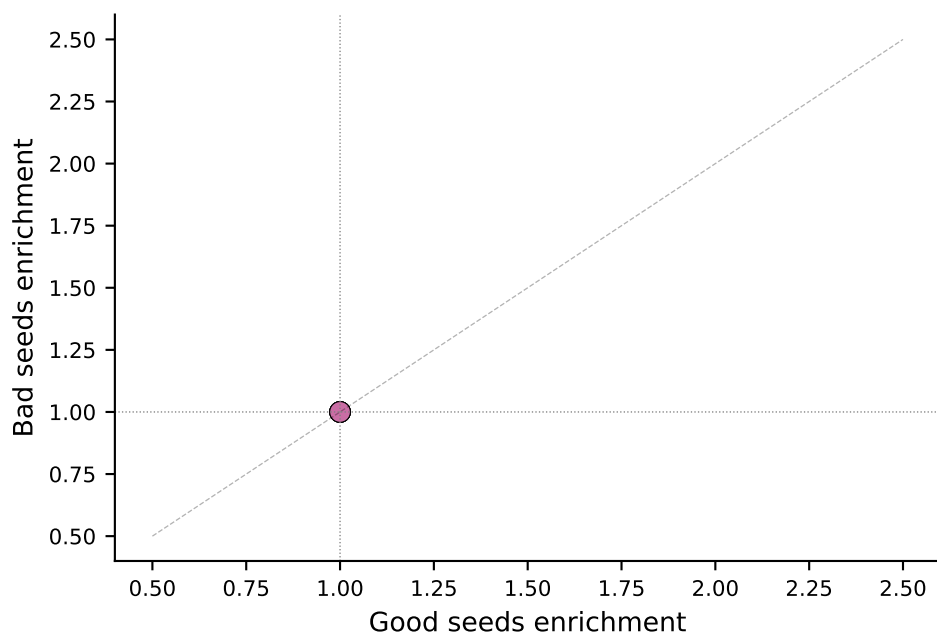

A Enrichment — All MTO Contributions

B Good vs Bad Atom-Type Enrichment

C Good vs Bad Enrichment

D Interpretation

Mean enrichment:
Good seeds: 1.000
Bad seeds: 1.000

Good and bad seeds show similar atom-type enrichment profiles. Per-slot μ/α specialization is partial (see Fig 7).

Note: atom-type proxy, not functional-group detection.
