

A Val & Test MSE by Seed

B Val vs Test MSE

C Good vs Bad/Worst Seeds

D Summary

Good seeds (1,3): test MSE = 0.458
 Bad/worst seeds (0,2,4): test MSE = 0.934
 Ratio (bad/good) = 2.0x

Good seeds reach test MSE ~0.46;
 bad/worst seeds plateau around ~0.86–1.08
 indicating seed-dependent optimization instability.
