

A Pairwise MTO Subspace Similarity

B Similarity Distribution

C Within/Between Group Similarity

D Interpretation

Mean subspace similarity = 0.51 ± 0.07

MTO response-mode subspaces are moderately consistent across seeds despite performance variation.

$S_{sub} \sim 0.51$ is above random baseline (0.0) but below perfect reproducibility (1.0).

This supports partial MTO stability as a response-mode representation.
