

A Validation Loss (log_interval=10)

B Training Loss (log_interval=10)

C Mean Val Loss by Group

D Interpretation

Note: log_interval=10, only every 10th epoch recorded.

Good seeds (1,3): continuous improvement through epoch 40.
Bad seeds (0,2,4): plateau after epoch 10 at ~1.17.

This pattern is consistent with optimization getting stuck in poor local minima for some seeds.

Not evidence of fundamentally different MT0 modes, but of seed-dependent convergence quality.
